

WRICON

DOMESTIC EARTHING SYSTEM

Clause 5.6.2.5 in AS/NZ S3000 states "Any conductive reinforcing within a concrete floor or wall of a room containing a shower or a bath shall be bonded to the earthing system of the electrical installation"

"An equipotential bonding conductor, in accordance with Clause 5.6.3, shall be connected between the reinforcing material and any part of the earthing system and the room."

Safe and effective electrical earthing is the essential requirement of all electrical installations. The **WRICON** earthing system has always been at the forefront of this in commercial, industrial and now domestic installations throughout New Zealand.

The **WRICON** Domestic Earthing System has been designed as a reliable and constant electrical earth for this purpose. This provides a direct electrical bond to reinforcing steel mesh in domestic housing concrete foundations.

The system can be installed easily, simply and professionally by contractors on site in the form of a clamped or welded connection to the reinforcing mesh.

The **WRICON** Domestic Earthing System earth lead is safely cast within the concrete and cannot be severed by other trades on site. CADWELD welded connections (unlike compression connections) do not deteriorate nor increase in resistance over time. The insulated earth lead incorporated in the **WRICON** Domestic Earthing System prevents galvanic corrosion and high resistance joints.

CLAMP SYSTEM

Part No. C-6-CK

10 metres 6mm PVC sheathed conduit wire, easy clamp system for connection to mesh, 10mm wrench, bare end suitable for crimp terminal.

WELDED SYSTEM

Part No. C-6-BT

10 metres 6mm PVC sheathed conduit wire, mild steel lug suitable for welding to mesh, bare end suitable for crimp terminal.
